

# LBZ55

Quality Load Banks  
at a Good Price

Recessed control panel with master and fan switches, step switches, digital meter and warning lamps.

Rugged, lightweight aluminum construction to ensure no rusting. (optional casters not shown)

High-speed fans to ensure that resistors are adequately cooled for a long life.

Recessed power connection panel with 400 amp cam-lock connectors.

## CONSTRUCTION

The structure is all-aluminum to ensure no corrosion.  
Heavy-duty skeleton frame holds panels and equipment in place.

## RESISTORS

The resistors are a stainless steel alloy to ensure long-life and a minimum change in resistance from cold to hot.

## SAFETY

Ground terminal is provided. Fan inlets are shielded. Thermal cutouts ensure that equipment does not exceed permissible temperatures.

## CONNECTIONS

Customer connects the power to the load bank via heavy-duty 400 amp industry-standard connectors. Control power is connected through a flanged male receptacle. An optional connection is via a comms port to the digital meter to record the test session.

## CONTROLS

The controls are in a recessed panel to prevent accidental damage. Master switch turns the unit and the meter display on. A fan switch turns the fans on and enables the load steps. Individual step switches allow power to be added in increments. A "load-enable" switch allows the load to be set first and then instantly loaded to the generator.

## OPTIONS

Available options are: 3" casters, digital recording capability.

## ACCESSORIES

Available accessories are: shipping crate with or without casters, vinyl cover.
